

Monster drank the tech sector's lunch.

A \$1,000 Monster Beverage investment grew to about \$2.32 million over the 25 years to 28 August 2026. But country sales and U.S. demand geography do not support a tech-hub consumption story.

MNST ENDING VALUE \$2.32m \$1,000 invested	MNST ANNUALISED 36.3% 25-year CAGR	EUROPE SALES TEST $r = -0.51$ vs ICT employment
--	--	--

Bottom line

Monster's exceptional equity return behaves like a technology winner; its retail geography does not. Across 14 European markets, value share declines as ICT-workforce concentration rises. Across U.S. states, relative search interest also declines as tech employment rises. These are correlations, not individual-level drinking data.

01

Growth of a hypothetical \$1,000

Adjusted month-end closes, 31 August 2001 to 28 August 2026. Logarithmic vertical scale; fees, taxes, and inflation excluded.

INVESTMENT		ENDING VALUE	MULTIPLE	CAGR
Monster Beverage	MNST	\$2,318,884	2,318.88×	36.34%
Apple	AAPL	\$1,152,438	1,152.44×	32.58%
Nvidia	NVDA	\$673,092	673.09×	29.75%
Microsoft	MSFT	\$29,658	29.66×	14.52%
Nasdaq-100 ETF	QQQ	\$23,211	23.21×	13.40%
S&P 500 ETF	SPY	\$10,585	10.59×	9.90%

02

North America dominates audited sales

Monster does not publish litres or cans by geography. The closest globally comparable public measure is FY2025 net sales for the broader Monster Energy Drinks segment.

What the regional table can—and cannot—say

The U.S. and Canada generated \$4.70bn, or 61.4%, of FY2025 Monster Energy Drinks segment net sales. EMEA contributed 22.2%; Latin America and the Caribbean 8.8%; Asia-Pacific and Oceania 7.6%.

Sales dollars are not litres: prices, product mix, exchange rates, channel coverage, and distributor timing differ. The evidence supports a largest-sales-market conclusion, not a per-capita consumption ranking.

Source: Monster Beverage 2025 Form 10-K. Segment includes Monster, Reign, Bang, and related energy brands.

03

Actual retail sales do not cluster in tech economies

Latest 13-week NielsenIQ scanner periods ending March 2026. Consistent Monster Energy Company retail value share across 14 European markets, compared with OECD ICT-specialist employment.

Independent export-based check

Using World Bank ICT-service exports as a second tech-intensity measure gives $r = -0.06$ —essentially no linear relationship. Ireland is an extreme export outlier; excluding it changes r to -0.58 , still not positive.

04

Monster interest rises away from tech-heavy states

Google Trends relative interest for “Monster Energy,” 31 August 2025 to 30 August 2026, compared with CompTIA’s technology-employment share. Search interest is not sales or consumption.

What the evidence supports

The boundaries below are part of the result: company sales, retail scanner share, online search interest, and individual consumption are related concepts, but they are not interchangeable.

Returns

Yahoo Finance adjusted closes at the August 2001 and August 2026 endpoints, with annual August observations for the chart. Split and dividend adjustments are included; taxes, fees, and inflation are not.

Direct sales test

NielsenIQ country tables report value share in measured retail channels. They do not identify purchasers or litres. Great Britain's OECD ICT-workforce observation is 2019; the other employment figures are 2023.

U.S. proxy test

Google Trends normalises interest within each region; 100 is the strongest relative interest, not an absolute search count. Age, income, rurality, retail mix, gaming culture, and sampling may confound the relationship.
